EDUCATION

Michigan State University **Graduation:** Dec. 2024
Bachelor of Science in ***Computer Science*** **East Lansing, MI**
Dean's List 3/3 Semesters **Cumulative GPA:** 3.87/4.00

Relevant Coursework by Summer 2023: Data Structures and Algorithms, Computer Organization and Architecture, Intro to Programming I, Intro to Programming II, Calculus I-III, Discrete Structures

TECHNICAL SKILLS

Languages: Python, C/C++, JavaScript, HTML/CSS
Technologies: React, Bootstrap, Azure, Flask, Unix, NLTK, pandas, NumPy, Git, Visual Studio Code, Jupyter Notebook

EXPERIENCE

GE Aerospace **Cincinnati, OH**
Digital Technology Intern *May 2023 – Aug 2023*

State of Michigan DTMB **Lansing, MI**
Data Science Student Assistant *July 2022 – Present*

- Developed a program to preprocess text data in over **1500** contracts with an accuracy of **95%** through a multi-layered approach using NLTK for further analysis with machine learning models.
- Led a team of **3** to create detailed reports of vendor data using pandas and NumPy to leverage statistical analyses, resulting in improved decision-making and high-performance vendor evaluations.
- Collaborated with development team under Agile development cycle to conduct User Acceptance Testing (UAT) on user stories, identifying up to **1-2** bugs daily, saving significant time spent on rework.
- Automated functionality of downloading targeted contracts by developing Python script that locates identified IDs in an Excel workbook, reducing the turnaround time significantly.

State of Michigan DTMB **Lansing, MI**
Data Analyst Intern *July 2020 – Sept 2020*

- Generated reports in Power BI using queries, resulting in an increase to the number of actionable insights found.
- Utilized Microsoft Access to efficiently update and maintain a large database, resulting in improved data accuracy and streamlined data retrieval processes.
- Collaborated closely with project manager to successfully deliver weekly projects and enhancements on time.

TECHNICAL PROJECTS

Conversation Translator (Front-end) Website | GitHub
Personal Project *Dec 2022 – Jan 2023*

- Developed a real-time voice translator web application that supports **15** of the most popular languages in the world and deployed to Firebase **(React, JSX, Azure, HTML/CSS, Web Speech API, Google Firebase)**.
- Used React hooks to manage state and handle functionalities such as language switching and speech recognition.
- Integrated Azure's machine translation and text-to-speech in web application for multi-language communication.
- Designed and implemented a responsive layout using Bootstrap for a user-friendly interface and easy navigation and usage.

News Aggregator (Full-Stack) Website | GitHub
Personal Project *Nov 2022 – Present*

- Built a full-stack web application to aggregate news headlines from multiple sources and deployed to AWS EC2 instance **(Flask, Python, Jinja2, Bootstrap, AWS, MySQL, HTML/CSS, requests, BeautifulSoup)**.
- Utilized Bootstrap for the front-end to create a responsive and visually appealing web page.
- Connected to a MySQL database to store headlines obtained from **8** popular news websites using web scraping techniques.

EXTRACURRICULARS

Artificial Intelligence Club: Undertook objectives in workshops such as studying neural networks, painting virtually, etc.
Spartan Toastmasters: Presented in front of large audiences over topics I had written about.
