EDUCATION

Michigan State University — **East Lansing, MI**
*Bachelor of Science in **Computer Science*** — **Graduation Date:** Dec 2024
Dean's List 3/3 Semesters — **Cumulative GPA:** 3.87/4.0

Relevant Coursework: Data Structures and Algorithms, Computer Organization and Architecture, Intro to Programming I, Intro to Programming II, Calculus I-III, Discrete Structures

TECHNICAL SKILLS

Languages: Python, C/C++, JavaScript, HTML/CSS, SQL
Technologies: React, Bootstrap, Flask, Unix, NLTK, pandas, NumPy, VSCode, Git, Jupyter Notebook

EXPERIENCE

GE Aerospace — **Cincinnati, OH**
*Digital Technology Intern (Focus area in **Software Engineering**)* — *May 2023 – Aug 2023*

State of Michigan DTMB — **Lansing, MI**
Data Science Student Assistant — *July 2022 - Present*

- Developed a program to preprocess text data in over 1500 contracts with an accuracy of **97%** through a multi-layered approach using **NLTK** for further analysis with machine learning models.
- Led a team of 3 interns to analyze and summarize vendor data by using **pandas** and **NumPy** to leverage statistical analyses and visual representations for the creation of detailed reports.
- Collaborated closely with development team under Agile development cycle by conducting UAT testing through user stories, reporting up to 1-2 defects a day.
- Automated functionality of downloading targeted contracts by developing Python script that locates identified IDs in an Excel workbook, reducing the turnaround time by at least **60%**.

State of Michigan DTMB — **Lansing, MI**
Data Analyst Intern — *July 2020 – Sep 2020*

- Generated Power BI reports using queries, leading to a **25%** increase to the number of actionable insights found.
- Utilized Microsoft Access to efficiently update and maintain a large database, resulting in improved data accuracy and streamlined data retrieval processes.
- Collaborated closely with project manager to meet weekly project/enhancement deadlines.

PROJECTS

Conversation Translator (Front-end) — **Website | GitHub**
Personal Project — *Jan 2023*

- Developed a real-time voice translator web application that supports 15 of the most popular languages in the world and deployed to Firebase **(React**, **JSX**, **Azure**, **HTML/CSS**, **Web Speech API**, **Google Firebase)**.
- Used React hooks to manage state and handle functionalities such as language switching and speech recognition.
- Utilized Microsoft Azure to integrate real-time machine translation and text-to-speech, enabling seamless communication in multiple languages within the web application.
- Designed and implemented a responsive layout for a user-friendly interface and easy navigation and usage.

News Aggregator (Full-Stack) — **Website | GitHub**
Personal Project — *Nov 2022 - Present*

- Built a full-stack web application to aggregate news headlines from multiple sources and deployed to AWS EC2 instance **(Flask, Python, Jinja2, Bootstrap, AWS, MySQL, HTML/CSS, requests, BeautifulSoup)**.
- Utilized Bootstrap for the front-end to create a responsive and visually appealing web page.
- Connected to a MySQL database to store the headlines obtained from the different news websites.

EXTRACURRICULARS

Artificial Intelligence Club: Active in workshops, covering topics such as neural networks, virtual painting, etc.
Spartan Toastmasters: Presented in front of large audiences over topics I had written about.
