EDUCATION

Michigan State University **Graduation:** Dec. 2024
Bachelor of Science in ***Computer Science*** **East Lansing, MI**
Dean's List 3/3 Semesters **Cumulative GPA:** 3.87/4.00

Relevant Coursework: Data Structures and Algorithms, Computer Organization and Architecture, Intro to Programming I, Intro to Programming II, Calculus I-III, Discrete Structures

TECHNICAL SKILLS

Languages: Python, C/C++, JavaScript, HTML/CSS, SQL
Technologies: React, Bootstrap, AWS, Firebase, Azure, Flask, NLTK, pandas, NumPy, Git, VS Code, Jupyter Notebook

EXPERIENCE

GE Aerospace **Cincinnati, OH**
Incoming Digital Technology Intern (Focus Area in **Software Development**) *May 2023 – Aug 2023*

State of Michigan DTMB **Lansing, MI**
Data Science Student Assistant *July 2022 – Present*

- Developed a program to preprocess text data in over **1500** contracts with an accuracy of **95%** through a multi-layered approach using NLTK for further analysis with machine learning models.
- Led a team of **3** to create detailed reports of vendor data using pandas and NumPy to leverage statistical analyses, resulting in improved decision-making and high-performance vendor evaluations.
- Collaborated with development team under Agile development cycle to conduct User Acceptance Testing (UAT) on user stories, identifying up to **1-2** bugs daily, saving significant time spent on rework.
- Automated functionality of downloading targeted contracts by developing a Python script that locates identified IDs in an Excel workbook, reducing the turnaround time significantly.

State of Michigan DTMB **Lansing, MI**
Data Analyst Intern *July 2020 – Sept 2020*

- Generated reports in Power BI using queries, resulting in an increase to the number of actionable insights found.
- Utilized Microsoft Access to efficiently update and maintain a large database, resulting in improved data accuracy and streamlined data retrieval processes.
- Collaborated closely with project manager to successfully deliver weekly projects and enhancements on time.

TECHNICAL PROJECTS

Conversation Translator (Frontend) Website | GitHub

- Developed a real-time voice translator web application that supports **15** of the most popular languages in the world and deployed to Firebase **(React, JSX, Azure, HTML/CSS, Bootstrap, Web Speech API, Firebase)**.
- Used React hooks to manage state and handle functionalities such as language switching and speech recognition.

News Aggregator (Full Stack) Website | GitHub

- Built a full stack web application to aggregate news headlines from multiple sources and deployed to an AWS EC2 instance **(Flask, Python, Jinja2, HTML/CSS, Bootstrap, AWS, MySQL, requests, Beautiful Soup)**.
- Connected to a MySQL database to store headlines parsed from **8** popular news websites using Beautiful Soup to web scrape the headlines from the HTML and XML files.
- Implemented Flask for the backend to retrieve raw data from the websites through the requests module.
- Utilized HTML, CSS, and Bootstrap for the frontend to create a responsive and visually appealing web page.

Music Player GUI GitHub

- Designed a sample music player to simulate the basic features a music player can accomplish.
- Used Tkinter and Pygame to create a GUI that supports actions of opening a music file, playing, pausing, muting, etc.

EXTRACURRICULARS

Artificial Intelligence Club: Undertook objectives in workshops such as studying neural networks, painting virtually, etc.
Spartan Toastmasters: Presented in front of large audiences over topics I had written about.
